# 212 STICKYBACK - SP075

Manufactured by **Printec** and converted by Servicom Pacific

## Application

Recommended For: All coating, varnishing, on-line coating & UV curing coating, press applications.

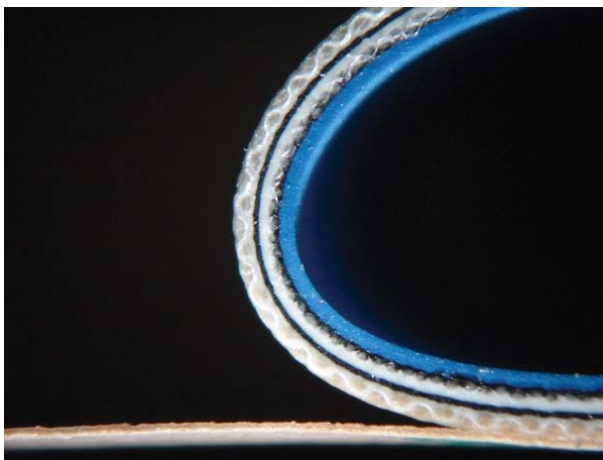

This is a fabric carcass blanket suitable for all coating/varnishing and which replaces the use of dimensionally unstable "stripping blankets" by utilising plates.

### Customer Remarks:

- No need to use a stretchable non dimensionally stable "stripping blanket"
- Easy to clean & remove
- Blanket releases beautifully
- Peels off with no shredding & a deep 1.40mm shoulder which eliminates buildup

Plus other carton/package presses (coating units)....

Blanket is stuck onto litho plate which is retro-fitted to blanket cylinder lock-up, therefore it maintains dimensional stability & provides unaltered registration.

## Features & Benefit

- Exclusive Adhesive System with the Highest Cohesive Strength: Installs Securely. Peels cleanly when removed. Can be repositioned, saving installation downtime.
- Quick Release: Faster wash-up & greater resistance to solvents.
- Full Fabric Carcass: Better smash resistance, resulting in longer life. Clean peel when removing (no shredding). More stable with better printability
- Deep "1.40mm" profile: Eliminates coating buildup.
- Mounts to Plates: Reusable with instant register due to the aluminum backing which guarantees dimensional stability.

## Technical Data

Colour	Blue
Description	A high performance stickyback printing/ stripping blanket
Surface	Buffed
Thickness	2 Ply 1.04 mm (+/- .051mm nominal)
Face Compound	Solvent Resistant Rubber Blend
Compressibility	9.0%
Hardness	79 Shore "A" 64 Micro Indent test
Adhesive Loop Tack	25 N/(10 mm) <sup>2</sup>
Adhesive Shear Strength	30 N/(10 mm) <sup>2</sup>
Smoothness	1.2 um
