GRAND CANYON - SP085

Manufactured by **PHOENIX** and converted by Servicom Pacific

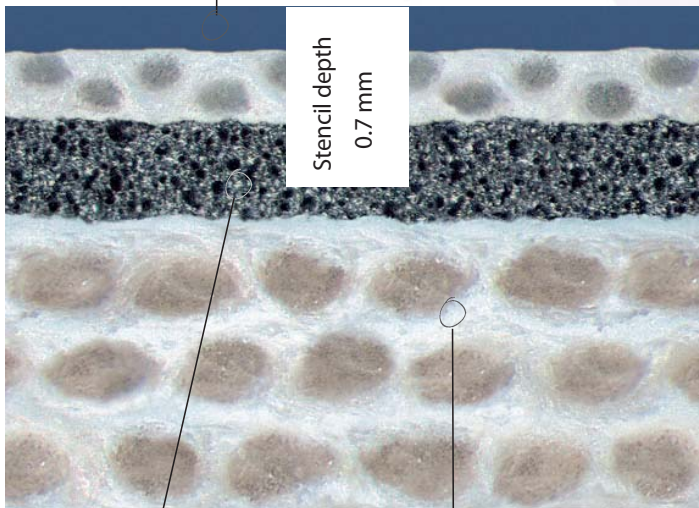

There is an increasing trend towards the use of varnishing blankets on sheet-fed presses. For this application we have developed GRAND CANYON®, a blanket that meets all requirements for spot and full-surface coating.

The compressible layer guarantees easy, perfect cutting – whether this is done manually or using a plotter. The specially developed 4-ply carcass guarantees the continuous use of GRAND CANYON®.

Equally suitable for UV- and aqueous varnishes through a newly developed face compound. Guarantees perfect gloss in both applications.

GRAND CANYON® guarantees the user a stencil depth of $\geq 0,7$ mm.

Optimized surface for
excellent coating
of conventional varnish

Unique!
Easy-to-strip
compressible layer
for manual and
plotter cutting

New 4-ply
carcass for
outstanding
stability

Technical Data

Colour	Blue
Thickness	Art. 352: 1.96 mm / 0.077" – 4-ply
Elongation at 500N/ 50mm	$\leq 0.9 \%$
Compressibility at 1350 kPa	Approx. 10%
Tensile strength	$\geq 4,500$ N/50 mm
Reduction in thickness due to tensioning and setting	$\leq 2 \%$
Hardness (total)	Approx. 78 Shore A
Surface rubber	Approx. 59 Shore A
Stencil depth	≥ 0.7 mm
Roughness RZ	5 μ m
Roughness RA	0.6 μ m
